

Exponential 6.0.15

Open source content management, rebuilt for today

Exponential is a free, open source content platform under the GNU General Public License, maintained by the Exponential Foundation and 7x together with a worldwide community.

Release 6.0.15 runs on PHP 8.1 to 8.5 and installs a complete site in under a minute.

What is new

The highlights of 6.0.15

- expwt: front-end editing and a page toolbar on every design.
- Modern designs with design tokens, dark mode and a strict Content Security Policy.
- Passkeys, two-factor sign-in and a "verify it's you" step for sensitive changes.
- Velocity, the PHP application server, for fast pages on modest hardware.
- Site packages that install on SQLite, MySQL, PostgreSQL, MongoDB and Oracle.

How it is built

Structured content, many views

- Content classes define typed fields; templates decide how content looks in each view mode.
- Siteaccesses run many sites and languages from one installation.
- Exponential Layouts compose landing pages from zones and blocks.

Get started

Next steps

- Install a site package: php bin/php/console exp:install --package=ezdemo_site
- Read the documentation: exponential.doc.exponential.earth
- Join the community: share.exponential.earth/forums
- Support and services: support.exponential.earth
